Tennessee Street Resurfacing Project

The recent resurfacing of Tennessee Street (U.S. 90) between Ocala Road and State Road 61 (U.S. 27/Monroe Street) in Tallahassee included several pedestrian improvements designed to promote safety along the corridor.

Along with repairs to deficient sidewalk and the replacement of noncompliant curb ramps, additional pedestrian safety improvements slated included a pedestrian barrier, two signalized mid-block crosswalks, access stairs/ramps from Tennessee Street to Florida State University and pedestrian signal features.
A pedestrian barrier installed in the median on Tennessee Street near Florida State University.

The $4.3 million project is expected to be complete later this spring.
