WHY IT’S IMPORTANT

FDOT and other transportation system operators support economic competitiveness by providing access and mobility. These core measures reflect the economic benefits of transportation investments and FDOT’s performance in delivering construction projects on-time and within budget.

WHAT WE MEASURE

**Return on Investment**

FDOT’s macroeconomic model evaluates the long-term economic benefits of the Transportation Work Program. Every $1 invested in FDOT’s Work Program generates ~ $4.40 in economic benefits.

**Construction Projects Completed On-Time**

Of the 350 completed construction contracts in 2013, 87% were completed within 20% of the original contract time, surpassing FDOT’s 80% target.

**Construction Projects Completed Within Budget**

Of the 350 completed construction contracts in 2013, 90.3% were completed within 10% of the original contract dollar amount, which surpassed FDOT’s 90% target.
