WHY IT’S IMPORTANT
Transportation investments contribute to our quality of life while affecting the human and natural environment in both positive and negative ways.

WHAT WE MEASURE

Air Quality
- **CORE MEASURE**
  Air quality is FDOT’s core measure for quality of life and environmental stewardship. How we move people and goods impacts air quality. Air quality is vital to public health and wellness. Standards are established by the Clean Air Act.

Transportation Alternatives/Enhancements
- **SUPPORTING MEASURES**
  FDOT supports community visions and values by implementing projects through the federally-funded Transportation Alternatives (TA) program.

Roadside Attractiveness
- **SUPPORTING MEASURE**
  Surveyed residents indicate a slight decreased perception of roadside attractiveness. Conversely, visitors indicate a high level of satisfaction with 92% agreeing that State Highway System roadsides are attractive.
