

## **RFRP #11/12-006 Analysis of Movable Bus Stop Boarding and Alighting Areas**

### **Technical Questions and Responses**

Question: Is it required to work with specific manufacturer/vendors for the main components of the moveable boarding pads?

Response: *It is not required to work with specific manufacturers/vendors. We are open to new concepts and ideas.*

Question: My understanding on this proposal project is that FDOT expects a feasibility study on the design of reusable boarding pads in bus stops. A sample of the reusable pads and installation of the pads in a bus stop are NOT required in the final results. Is it correct?

Response: *A sample is not required. We are looking for suggestions, recommendations, possibilities and ideas for further consideration.*

Question: Does the project require site visits in various parts of Florida?

Response: *No site visits are required. However, as discussed in the pre-proposal meeting, if the researcher feels a site visit is necessary to inspect existing relocatable bus stops or systems, FDOT will work with them to review travel requests and approve them as necessary.*
